

Achieving early identification of post-stroke spasticity

23 September 2020, 09:00 CEST and 20:00 CEST

We invite you to join our webinar

Please join Professor Jörg Wissel and Dr Ganesh Bavikatte for the webinar '**Achieving early identification of post-stroke spasticity**', which will focus on the importance of early recognition of the disease, using a patient case study to demonstrate possible 'red flags'.

After examining predictors and risk factors for post-stroke spasticity (PSS) early after stroke, you will then see how the PSS Risk Classification System tool can be used to classify patients like that described in the case study.

5 mins	Welcome and introductions	Prof. Jörg Wissel Neurorehabilitation, Vivantes Hospital Spandau, Berlin, University of Potsdam, Germany
20 mins	Importance of early identification of post-stroke spasticity	Dr Ganesh Bavikatte The Walton Centre, University of Liverpool, UK
20 mins	Predicting post-stroke spasticity	Prof. Jörg Wissel
10 mins	Questions from the audience	Dr Ganesh Bavikatte Prof. Jörg Wissel
5 mins	Summary	Prof. Jörg Wissel
